FALL - 1947

Tall, Narrow, Hardy Yews

John Vermeulen & Son, Inc.

Nurserymen

Westbury, L. I., New York

Phone Westbury 328

Gentlemen:

As Fall approaches we offer, for your scrutiny, our list of stock available for Fall plantings. As some stocks are limited, we are sending this list only to customers who have purchased from us in the past and to some others whom we feel may be interested in what we have to offer. Items listed in general list are for Fall shipment and will not be reserved for Spring unless prepaid in full.

Some of you are already planning Spring plantings and for you we have listed a few select items that will be available for Spring delivery. You will find these on pages 7 and 8. Our main Spring list will be mailed in January.

Your orders will be appreciated and will be given our prompt attention.

Very truly yours,

JOHN VERMEULEN & SON, Inc.

OUR OWN INTRODUCTIONS IN RECENT YEARS

ACER PALMATUM BURGUNDYLACE—Laceleaf Japanese maple. An impressive maple with burgundy-red and beautifully laced foilage. Obtained as a natural cross, it has been tested and found hardy and a fast grower. Well liked, too, by past buyers. Makes exquisite specimens.

3" pot 1 yr per C \$150.00

AZALEA HINO—CRIMSON. A marvelous discovery of a natural cross between Hinodegiri and Amoena. Its showy, clean, crimson-red flowers do not fade at all as do the Hinodegiri. It is hardier than the Hinodegiri and a fast grower with glossy dark green foliage. Good for forcing and much in demand by those who have already tried it. Ask for a color photo print.

rtd	ctgs	per C	\$ 12.00
rtd	ctgs	per M	100.00

B&B 4-6"		per C	60.00
B&B 6-8"		per C	80.00
B&B 8-10"		per C	120.00

ILEX OPACA PYRAMIDALIS—Pyramidal American Holly. Though this is not our discovery we originally selected it for propagation for its outstanding qualities. It is distinctly tall and pyramidal in form and is very hardy. The leaves are semi-glossy and make a striking background for the profuse red berries. Considered as outstanding by many who have grown it on for years.

2 1/4"	pots 1 yr	per C	\$ 30.00
3"	pots 6-8"	per C	50.00
(50) 3"	pots 8-10"	per C	75.00

TAXUS CUSPIDATA VERMEULEN—Vermeulen Yew. Introduced by and named for John Vermeulen a good many years ago and already well known throughout the country. The needles are more or less like Brevifolia but do not curl. The growth habit is upright with a dense base and sloping gently to a point as an obelisk. It is excellent for hedging and makes smart, superior, specimen plants.

(See page 6 for sizes and prices)

TAXUS MEDIA KELSEYI—Berrybush Yew. Introduced at the same time as the Cusp. Vermeulen and commonly

called "Berrybush Yew" because of its preponderance of bright red berries in the Fall. It is a strain of *Taxus media* with semi dwarf habit and is extremely hardy. The needles are long, strong and dark green. Also well known, it can be used for large hedges but being of bush form it is wisely used for specimen and foundation plantings.

(See page 6 for sizes and prices)

TAXUS MEDIA KELSEYI UPRIGHT—This desirable variety was introduced last year. It grows into a large columnar plant meanwhile retaining the other qualities of the Kelseyi except that it does not berry.

2 1/4"	pot	1 yr	per C	\$ 30.00
3"	pot	2 yr	per C	75.00

TAXUS MEDIA IN VARIETY—TALL, NARROW AND HARDY! The following 7 *Taxus* are of a group of 30 outstanding seedlings chosen in 1932 for testing and growing on. Of the 30, these seven so far have made the grade of being considered as truly worth while to offer to the trade. They are extremely hardy and in form are substantially as depicted in the sketch on the front page of this list. Their use for formal plantings and gardens will warrant much praise and pleasure.

TAXUS MEDIA PILARIS—Pillar Yew—Key a and c. Long, narrow, medium dark needles. Narrow growing habit. Short, upward sloping branches.

TAXUS MEDIA PILARIS GRANDIFOLIA—Bigleaf Yew Key a, d and e. Similar in shape and growth to *Pilaris* but with very much larger needles. The effect is rich and unusual.

TAXUS MEDIA PYRAMIDALIS—Pyramidal Yew—Key b, d and e. A fast growing yew with vertical branches and striking black-green needles. Truly a rich, showy, full-bushed column.

TAXUS MEDIA PYRAMIDALIS ROBUSTA—Obelisk Yew—Key b, d and e. Similar to *Pyramidalis* but heavier branched. The needles are large and more glossy.

TAXUS MEDIA STRICTA—Narrowbush Yew—Key b, d and e. The needles are short and thin, giving a compact effect which the almost vertical branches and dwarf, narrow shape augments.

TAXUS MEDIA STRICTA VERIDIS—Grassgreen Yew—Key b, d and e. Similar in every way to *Stricta* except the needles which are longer and a gay, bright green, both Winter and Summer.

TAXUS MEDIA SENTINALIS—Sentinel Yew—Key a. The most unusual and surprising of the seven. Introduced for the first time this Fall. Just sufficiently clothed with short branches and foliage to densely cover the main stem.
